Storyline

The furious and hungry snake named Slyther is on the hunt for delicious food in the forest. Slyther has insatiable desire for the mouthwatering apple because they are not only filling him up but also making him grow. However, on the way to the hunt he must face some obstacles like the life-threatening walls and his own tail which can stop him from getting what he wants.

GAME OVERVIEW

With this game we wanted to create something for all generations, simple but addicting. The main goal of this game is to lead the snake through a small play area while avoiding collisions with the surrounding walls and the snake's own tail which grows longer while feeding it.

The three rules of the game :

- The snake moves continuously in the chosen direction by the player;
- When the snake consumes apples, it grows longer;
- The game will continue until the snake touches the walls or its own tail;

Our main classes:

GAME

SNAKE

APPLE

DEVELOPMENT PROCESS

Game concepts,
objectives and
features;

Game board, snake
and apple sizes;

Implementing
apple generation;

Handling Collision
outcome;

Managing scoring,
game progression
and conditions;

Trying out
different graphics;

Music and sound
effects;

One of our main issues was the design of the snake, adding details and creating the final design which extends every time the snake eats an apple.

ISSUES/ERRORS

Progression and fixing on our issue

First design

Final design

Evaluation and Reflection

Now evaluating and reflecting on our previous work we have realized that we did the biggest development mostly on the code by changing the design of the snake and its extension. If we had more time, we would evaluate this in a way , we would add an introduction page to the game which would make the game more professional and advanced, we would also create more levels to be completed on the game can be challenging and fun, amongst other ideas.

ENJOY THE DEMO OF OUR GAME.
